InfiniTube VIDEO/MACHINE VISION MICROSCOPES

InfiniTube FM-Series Main Bodies. *All InfiniTube FM-Series Main Bodies are designed for use with infinity-corrected objectives only. All FM-Series InfiniTubes incorporate Internal Focusing Capability adjustments and may be used with Infinity Photo-Optical objectives or with Mitutoyo, Nikon or Olympus objectives. The FM-100 is designed for very small camera sensors (e.g., 1/4-in.) or for use with a DL 2x Amplifier, thereby constructing a compact 200 mm standard-power system. The FM-200 is the choice for direct use with all objectives at standard microscopical magnifications. When used with equivalent of 200mm, the FM-Series covers up to 2/3-in. sensors.*

*The **PL-Series Objectives** (see below) provide extraordinary images at lower cost than traditional microscope objectives. When used with PL-Series Objectives, the **FM-50 has a 1x factor**, the **FM-75 has a 1.5x factor**, the **FM-100 has a 2x factor** and the **FM-200 has a 4x factor**. In such cases, the engraved magnification of the PL Objective is multiplied by those respective factors.*
