KX InfiniMax LONG-DISTANCE MICROSCOPES

The KX InfiniMax incorporates a unique “balanced” ConstantMag™ system that compensates the increase in magnification caused by closer focusing by a reciprocal counter-reduction in magnification within the internal focusing system itself. Consequently, KX InfiniMax provides magnification stability heretofore typically obtained only from telecentric lenses, yet with resolution second only to Infinity’s own Model K2 long-distance microscope. Due to its internal focusing, the KX InfiniMax’s outer dimensions remain exactly as originally configured. The KX InfiniMax is therefore ideally suited for high-resolution gauging/measuring applications.

Six MX-Series objectives attach to the KX InfiniMax Main Body to obtain six basic magnification choices. Ranging the KX InfiniMax’s focus provides virtually the same magnification regardless of working distance.

Directly, the KX InfiniMax can be used with video formats up to 2/3-in. With the Large Format Amplifier (LFA), the KX InfiniMax can be used with video and photo formats up to 24x36mm (35mm SLR cameras or very large video formats).

It is easy to order a KX InfiniMax suited to your needs. Simply choose the KX InfiniMax Main Body, Objectives and applicable accessories to configure a complete KX InfiniMax system.
